vivekkumarsahusiawal@gmail.com — +91-7389352838 — LinkedIn — GitHub

## SUMMARY

---

Computer Science undergraduate with strong expertise in Java backend development, specializing in Spring Boot, Microservices, REST APIs, Redis, Docker, Jenkins, and AWS. Experienced in designing scalable backend systems using SOLID Principles, Design Patterns, JWT authentication, Service Discovery, and CI/CD pipelines.

## EDUCATION

---

**Shri Govindram Seksaria Institute of Technology and Science (SGSITS), Indore** Aug 2022 – Jun 2026  
Bachelor of Technology (Information Technology)

## TECHNICAL SKILLS

---

**Languages:** Java, C++, SQL  
**Frameworks:** Spring Boot, Spring Security, Spring MVC, REST APIs, JWT  
**Database:** MySQL, Redis, AWS RDS  
**Cloud & DevOps:** Docker, Jenkins, CI/CD, AWS EC2, Elastic Beanstalk  
**Concepts:** OOP, SOLID, Design Patterns, LLD, Multithreading  
**Tools:** Git, GitHub, Maven, Postman, IntelliJ IDEA

## PROJECTS

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                        |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|--------|
| <b>Product Catalog Service</b>                                                                                                                                                                                                                                                                                                                                                                                                       | <i>Spring Boot, JPA, MySQL, Redis, Docker, Jenkins</i> | GitHub |
| <ul style="list-style-type: none"><li>Developed a RESTful Product Catalog microservice supporting CRUD operations using Spring Boot and JPA.</li><li>Improved API response time by <b>99.6%</b> (2.06s → 10ms) using Redis caching.</li><li>Containerized the application with Docker and automated build/deployment using Jenkins CI/CD.</li><li>Implemented validation, global exception handling, and JUnit test cases.</li></ul> |                                                        |        |
| <b>User Authentication Service</b>                                                                                                                                                                                                                                                                                                                                                                                                   | <i>Spring Boot, Spring Security, JWT, MySQL</i>        | GitHub |
| <ul style="list-style-type: none"><li>Developed secure authentication and authorization APIs using Spring Security.</li><li>Implemented JWT-based authentication with Role-Based Access Control (RBAC).</li><li>Secured REST APIs through token validation and custom authentication filters.</li><li>Followed layered architecture with centralized exception handling.</li></ul>                                                   |                                                        |        |
| <b>Service Discovery Server</b>                                                                                                                                                                                                                                                                                                                                                                                                      | <i>Spring Boot, Netflix Eureka, Microservices</i>      | GitHub |
| <ul style="list-style-type: none"><li>Built a centralized Service Discovery Server using Netflix Eureka.</li><li>Enabled automatic registration and discovery for Product and User services.</li><li>Eliminated hardcoded service URLs through dynamic service lookup.</li><li>Improved scalability and maintainability of the microservices architecture.</li></ul>                                                                 |                                                        |        |
| <b>Payment Service</b>                                                                                                                                                                                                                                                                                                                                                                                                               | <i>Spring Boot, Razorpay, MySQL</i>                    | GitHub |
| <ul style="list-style-type: none"><li>Developed a secure payment microservice integrated with Razorpay APIs.</li><li>Implemented Strategy Design Pattern for flexible payment gateway selection.</li><li>Designed REST APIs for payment creation, verification, and transaction status.</li><li>Built a modular architecture with centralized exception handling.</li></ul>                                                          |                                                        |        |

## ACHIEVEMENTS

---

- Solved 300+ Data Structures and Algorithms problems on LeetCode and Scaler.
- Built multiple production-style backend applications using Spring Boot and Microservices architecture.
- Reduced API response latency by 99.6% using Redis caching.
- Automated application build and deployment using Docker and Jenkins CI/CD pipeline.

## CODING PROFILES

---

**LeetCode:** leetcode.com/u/vivek\_ku
